EQUINE SANITATION, LLC

TO WHOM IT MAY CONCERN

Green Horse Equine Sanitation, LLC (Charleston, SC) specializes in the sanitation of equine wastes. The company is solely responsible for the safe and effective management of equine wastes generated by horse and carriage tours operating in historic downtown Charleston. Carriage tours operate in close proximity to restaurants, motels, retail stores etc. Consequently, the management of ammonia volatilization and other harmful odors from equine wastes is paramount to the effectiveness of our operation.

There are many products on the market that claim to reduce animal waste related odors. I have tried dozens of them in my over 30 years of working with horses. Unfortunately, most products that I've tried produce little to no results, are far too expensive, or both. That was until I was introduced to OdaLock™ ART, a product sold by US Environmental Resource & Recovery Group, LLC (USERRG) out of Walterboro, SC. Like all products, we were beyond skeptical at first, but after witnessing a quick and simple product demonstration we became intrigued.

Initially, we used OdaLock™ on a small scale in our own private stables with great results. Since January 1st, 2013, OdaLock™ has been applied religiously everyday throughout the streets of downtown Charleston to sanitize and combat equine waste ammonia odors. Historically, ammonia odors were problematic in Charleston, particularly during the hot and humid spring and summer months. The implementation of OdaLock™ as part of our daily operations has made odor concerns a thing of the past.

If you are looking for the safest, most effective and economical technology available to reduce and prevent ammonia odor, Green Horse Equine Sanitation, LLC recommends OdaLock™ ART.

Please feel free to contact me should you require any further information.

Sincerely,

Richard R. Knoth
